structura

The upcoming ERP solution for The plastics processing industry

Your sector –

The plastics processing industry

The plastics processing industry is divided in three major parts: plastics manufacturing, plastics processing and engineering. All three sectors are connected and dependant on each other. For applications made in plastic you play a very unique role.

With plastics processing, the optimal and functional injection-moulded part is produced, which in return depends on special machinery and equipment engineering. With rising customer demands for improved quality, better prices and better service, faster production cycles and the tendency for system providers, the need for improved and high performing software solutions rises. Meet the challenge, today and in the future, by consistent and integrated business processes, applying consistent quantity and value-flow management along your whole value-added chain.

Your requirement

As decider of your plastics processing company, your requirements for your company's software solution are:

- Future-oriented software with continuous process optimization
- Consideration of raw material problems
- Support of development processes for Products and equipment
- Lead time optimization
- Integrated document management
- Integrated quality management

structura at a glance

Sector

Medium-sized plastics processors

- Producer for projects
- Serial producers
- Producers under licence
- Small serial producers

Core processes

- Planning+costing
- Quotation management
- Sales order management
- Production planning and control
- Capacity planning
- Injection moulding management
- Equipment management
- Acquisition management
- Inventory management
- Quality management

Highlights

- Consistent project management
- Make-to-stock production with sales order reference
- Planning and scheduling processes
- Equipment availability check
- PDC/control room interface
- Document management for internal and external documents with CAD integration
- External processing management
- Batch management
